Re: Potential LEED v4 credits for projects using Grate Mat by Mats Inc.

To whom it may concern:

Many finishing products have the potential to contribute points to LEED v4, however the credits can only be gained when calculating the combined performance of all the products used on a particular LEED project; therefore no single product can guarantee you will obtain LEED v4 credits.

The LEED v4 rating system promotes improved practices in the following credit categories:

- Location & Transportation
- Sustainable Sites
- Water Efficiency
- Energy & Atmosphere
- Materials & Resources
- Indoor Environmental

I am delighted to confirm that Grate Mat may contribute to the following LEED credits (points), the following is based on LEED NCv4:

- **v4 MRp2**: Material and Resources – Construction and demolition waste management planning:
  - The tiles or planks reduce waste from the installation process, reducing waste in landfills.
  - Made from recyclable material and / or is a reusable product, reducing waste in landfills.

- **v4 MRc1**: Material and Resources – Building life-cycle impact reduction:
  - Option 3. Building and material reuse. This product can be reused or salvaged from off-site or on-site as a percentage of the surface area. Note: Materials contributing toward this credit may not contribute toward MRc3.

- **v4 MRc3**: Material and Resources – Building product disclosure and optimization, sourcing of raw materials:
  - Option 2. Sourcing of raw materials.
    - Materials reuse. Reuse includes salvaged, refurbished, or reused products.
    - Recycled content. Recycled content is 49% preconsumer.

- **v4 EQc1**: Indoor Environmental Quality – Enhanced indoor air quality strategies:
  - Option 1. Enhanced IAQ strategies. Installed with at least 10 feet (3 meters) in length in the primary direction and maintained on a weekly basis.

If you require any further information, please do not hesitate to contact us.

Sincerely,

Kevin Phillips
